Shaking Intensity

The location of this earthquake is in ocean waters more than 200 nautical miles from the nearest coastline. It is unlikely that this event will cause shaking-related damage in populated regions. However, large magnitude (M > 7.0) earthquakes at shallow depths may produce ocean-wide tsunami waves that could affect nearby coastal communities. For more information on the latest tsunami warnings, see <http://tsunami.gov/>

This information was automatically generated and has not been reviewed by a seismologist.
